upper transport exponent
worst phase (companion), when
$\beta_e = \beta$: $1 - \log\lambda/(2\beta)$
all-phase upper bound
(companion): $\beta/(\beta + \log\lambda)$
worst phase
not determined
this paper, $\theta \in G_\alpha^*$:
$\max\{0, 1 - \log\lambda/\beta\}$
$\theta = 1/4$ lower bound
when $\beta_e = \beta$
$\lambda = 1$
$\lambda = e^\beta$
$\lambda = e^{2\beta}$
coupling λ, on the scale $\log\lambda/\beta(\alpha)$, at fixed $0 < \beta(\alpha) < \infty$
