$q_{j-2}/K$
$q_{j-1}/K$
$q_j/K$
$q_{j+1}/K$
$\log T$
$t_* = \frac{1}{a}\log(2C_D q_j)$
estimate used at time $T$
A: estimate at $q_{j-1}$
B: window of $q = q_{j-1}$
A: estimate at $q_j$
A: estimate at $q_{j+1}$
window $dq \le \log T \le Bq$ of the scale $q = q_{j-1}$, which has $b_{j-1} \ge c$
barrier if $b_{j-1} < L + 2\eta$; slow dynamics and barrier if $b_{j-1} \ge L + 2\eta$
schematic, not to scale
